DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-20, drawn to a method for forming an oxide layer by applying a coating material, classified in class 427, subclass 397.7.
 - II. Claim 21, drawn to an apparatus for forming an oxide film by applying a SOG layer, classified in class 118, subclass 66.
 - III. Claims 22-27, drawn to an apparatus for forming an oxide film using flames, classified in class 118, subclass 47.
 - IV. Claims 28-31, drawn to a method for forming an oxide film using flames, classified in class 427, subclass 223.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another materially different process, i.e., the apparatus as claimed can be used to apply and heat a material other than a coating material such as applying and heating a cleaning solution or an etchant.
3. Inventions III and IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another

materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another materially different process, i.e., the apparatus as claimed can be fueled with materials other than H₂ and O₂, such as N₂ or another inert gas.

4. Inventions I and II are unrelated to inventions III and IV. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation and are capable of use together. Inventions I and II are directed to applying a coating material and heat-treating the coating layer to form an oxide layer. Inventions III and IV are directed to using flames fueled by process gases to form an oxide layer on the substrate.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Due to the complexity of the restriction requirement, the requirement is being mailed.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
